CAREER OBJECTIVE

Recent BCA graduate and aspiring Data Scientist skilled in Python, data analysis, and machine learning. Passionate about extracting insights from data and building data-driven solutions to support business decision-making.

TECHNICAL SKILLS

Programming: Python
Libraries: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn
Machine Learning: Supervised Learning, Unsupervised Learning, Model Evaluation
Deep Learning: PyTorch, ANN, CNN, RNN, LSTM, GRU
NLP: Tokenization, Sentiment Analysis, Stemming, Lemmatization, Vectorization
SQL: DDL, DML, DCL, TCL, DQL
Tools: Jupyter Notebook, Google Colab, Power BI, VS Code, Git, GitHub, MS Office

EDUCATION

- **Bachelor of Computer Applications:** 2022 - 2025
  Science College (Autonomous), Hinjilicut. **CGPA:-7.71**
- **Intermediate in stream science:** 2020-2022
  Kalam institute of technology **percentage76%**
- **Secondary School Certificate:** 2020
  Basudev Govt High School **percentage73%**

PROJECTS

Exploratory Data Analysis (EDA) on Titanic Dataset

Tools:(Python, Pandas, NumPy, Matplotlib, Seaborn)

Conducted a comprehensive Exploratory Data Analysis (EDA) on the Titanic dataset, which consists of demographic and ticket information for the passengers The project aimed to uncover patterns and insights regarding passenger survival rates based on various features.

Flight Fare Prediction (Machine Learning Model)

Tools:(Python, Scikit-learn, Data Analysis, Model Evaluation, Streamlit Deployment)

Developed an end-to-end ML system to forecast flight ticket prices using historical airline data. Conducted data preprocessing, EDA, and feature engineering with Pandas/NumPy and visualized trends using Seaborn/Matplotlib. Trained and optimized regression models (Linear Regression, Random Forest, Gradient Boosting) and deployed the best model through Streamlit for real-time predictions.

INTERNSHIP

1. **Data Science Intern** Jan 2026 – Feb 2026
   (Teks Academy)

Conducted exploratory data analysis on multiple datasets to identify trends and insights. Developed a flight ticket price prediction model using regression techniques and performed data cleaning and preprocessing. Created visualizations and dashboards to present findings and shared project work through GitHub for collaboration and documentation.

ACHIEVEMENTS

- Completed multiple Data Science projects using Python and Machine Learning techniques.
- Built a Flight Fare Prediction model using regression algorithms.
- Published data science projects on GitHub demonstrating data analysis and visualization skills.
- Performed Exploratory Data Analysis on real-world datasets including the Titanic dataset.
